

YOUR HERD IN GOOD HANDS

Complete control and a clear overview

YOUR HERD IN GOOD HANDS

Complete control and a clear overview

In today's world, being a sustainable and profitable dairy farmer is challenging. Simple and innovative solutions must match your needs and those of your animals so that you can operate efficiently. For many years, we have been putting our knowledge and expertise of specialists to work for dairy farmers around the world. We strive to provide functional solutions that support you in your daily work. Our goal is simple: your dairy farm has to be healthy. This is where we have taken the next step: Apollo Farm Control.

YOUR HERD IN GOOD HANDS

Apollo Farm Control gives you more control over the most important parameters for your farm. With the latest data from Apollo Farm Control, you can manage your daily routines more efficiently so you can keep track of your herd. You can set up your ongoing processes such as milking, feeding, separation, animal identification and heat detection according to your own wishes and needs.

GOOD AND CLEAR OVERVIEW OF YOUR HERD

With the graphical overview, you can optimise your business processes both at the farm level and at the individual animal level. You can quickly enter data for several animals simultaneously and filter different groups.

24/7 ACCESS, ANYTIME, ANYWHERE

You can access your herd data anytime, anywhere: on the Milking Parlour Monitor in the parlour, on your PC/laptop, tablet or mobile. This means you can always react to attentions brought to your attention, allowing you to make the right decision quickly.

SIMPLE, USER-FRIENDLY AND SAFE

Apollo Farm Control is simple and easy to use, and you only see the modules you choose. Your herd data, on the Apollo Controller, is kept separate from your 'own' internet and therefore your data is always protected against possible viruses and power cuts.

THE BENEFITS FOR YOU

- Simple and user-friendly
- Graphical data display
- Easily enter data for multiple animals
- A good and clear overview of your herd
- 24/7 Access, anytime/anywhere

APOLLO FARM CONTROL MADE TO MEASURE

Choose which relevant modules you need for your dairy farming

APOLLO
CONTROLLER

APOLLO BASIC

Apollo UniControl unit records all events. The data is sent directly to your Apollo Farm Control unit and stored in datafiles, up to 90 days back in time. Apollo identification ensures that your animals are recognised so that the information and processes are actually carried out as appropriate. Ofcourse the animal data information is included in Apollo Basic.

APOLLO
UNICONTROL

APOLLO
IDENTIFICATION

APOLLO
SELECTION

APOLLO SELECTION

With this module, you can separate the animals using a selection gate. Animals can be sorted based on manual input (via the management system or Milking Parlour Monitor) or automatically.

APOLLO
FEEDING

APOLLO FEEDING

With this module, you provide feeding to the animals. You control the Apollo Feeding pens for both feeding stations and feed in the milking parlour. Each animal receives the right amount of concentrate according to the settings you have entered.

APOLLO
MILKING

APOLLO MILKING

Displays all milk-related information available (at the animal, group level and herd level). Examples include milk yield (compared with previous days), expected yield and conductivity.

APOLLO
UNITRACK

APOLLO UNITRACK

Displays activity data and graphs for animals equipped with the Unitrack transponders. Provides an overview of the health based on the activity, eatime and rumination.

APOLLO
PPA

APOLLO PPA

(PARLOUR PERFORMANCE ANALYZER)

The PPA offers more insight into and analysis of the Key Performance Indicators in your milkproces. It gives you support and guidance for you and your milkers, allowing you to optimise your milk production to reduce costs and increase efficiency.

APOLLO
MPM

APOLLO MPM

(MILKING PARLOUR MONITOR)

Displays all relevant milk related data for each animal currently in the parlour. It offers options to check the identification and milking place and introduce a milk or animal separation for a single animal. One unique feature: Key Performance Indicators (KPIs), activation of the second turn and sending stop milking/manual milking commands to an IDC milking meter.

APOLLO
TAURUS

APOLLO TAURUS

The available data you collect with Apollo Farm Control can be linked, by using the Apollo Taurus, directly to your management system, allowing you to roll out a longer-term vision of your farm.

SERVICE

You need to be able to rely on Apollo Farm Control. Our experienced service team is at your service 24/7, 365 days a year. After all, it is important that you and your employees can do the work optimally.

Service, maintenance and repairs are carried out by skilled and well-trained technici. With their years of experience in the maintenance of SAC milking systems, they can provide you with the best possible service.

TECHNICAL ASPECTS

- Apollo Controller in a stainless steel cabinet with its individual power supply and back-up in the event of a power failure
- Small and light cabinets with a transparent lid for easy status reading
- Controllers with their individual power supply
- Easy installation: all outputs are 24 VDC, for direct control
- Prepared to connect closing gate feeding station
- Stand-alone selection option, no management system required
- Remote software updates
- Manage remote settings of Apollo Controllers
- Minimal wiring due to smart print connectors
- Easily adjust your software settings yourself
- Annual license for use of software
